BUSINESS VAULT™ provides stability and reliability for your organisation’s technology investment.

How would you like to never again worry about...

- Servers?
- Licensing IT applications?
- Not being able to access your information out of the office?
- Being locked into lengthy contracts?
- Keeping your technology up to date?
- Losing an important email?
- Whether your backups worked?
- Ensuring your anti-virus software is up-to-date?

At Computer Troubleshooters, we believe in a 6-layered approach to your Information Technology investment. We have conveniently packaged these six vital roles in an all-encompassing product called **BUSINESS VAULT™**.

Although **BUSINESS VAULT™** works best as a package, it is possible to purchase components separately according to your specific requirements and/or investment constraints.

BUSINESS VAULT™ provides the following benefits to your business:

- ✓ **Reduced capital expenditure.**
We have already made significant IT purchases so you don't have to.
- ✓ **Device and location independence.**
You have access to your systems regardless of location or device. (e.g., PC, laptop, mobile phone)
- ✓ **Utilisation and efficiency improvements.**
A large portion of traditional systems are often only 10-15% utilised.
- ✓ **Instant Scalability.**
On-demand allocation and de-allocation of CPU, RAM, storage and network bandwidth.
- ✓ **Improved Reliability.**
The use of multiple redundant components and data centre facilities makes it ideal for disruption avoidance, business continuity and disaster recovery.
- ✓ **More effective use of staff**
Improved efficiencies will enable your IT staff to work on their core business, rather than fixing problems
- ✓ **Increased Sustainability.**
Improved resource utilisation, more efficient systems, and server consolidation helps makes your business more "Green".

How does a BUSINESS VAULT™ investment compare?

The following chart compares a BUSINESS VAULT™ implementation against a traditional IT infrastructure. Figures are based on all the components being utilised in a company with 20 PC users.
